

Alarm on MAIL or SMS

The unit is not sending data

If you get a message like this !!!

Then take it easy be cool and wait.

If you get the same message again, then you must take action fysically.

1. Go to the place where the Main module is installed.
 - a. Check that there is Light in the red LED lamp on the module
 - i. **If there is NO light in the lamp**
 - ii. **then check the powersupply and wall switch.**
 - iii. **If there is light in the LED lamp**
 - iv. **Then check that the lamp is blinking once pr. Second.**
 - b. IF THE LAMP IS NOT BLINKING
 - i. Then turn of the power and screw of the lid on the mainmodule boks (4 philip screws), and check that the SIM card is in the right place.

NO TELESIGNAL

If everything above is ok and the red LED lights constantly, so it may well be that the telecommunications signal is bad.

SOLUTION

1. You can try to turn of the main module, by pulling out the powercord from the main module boks, wait 10 seconds and push in the power cord again, after a few seconds the LED shall start to blink.
2. Or you can wait until the signal is OK again in the area, check after a few hours. The main module will always try to find a secondary Tele-signal and use that.
